DTD 197A (BS B23)

BRONZE ALLOY

Page: 1 of 1

Product Overview

When commercial CA104 is not deemed fit for purpose, **DTD 197A (BS B23)** is another wrought alloy version of 10/5/5 aluminium bronze that deserves consideration.

DTD 197A is an aerospace engineering sector alloy. However, the material is also popular in the marine and chemical sectors due to the material's excellent corrosion and erosion resistance in seawater and other chloride environments. DTD 197A offers superior wear and shock resistance and is a high-strength alloy that retains its characteristics at cryogenic temperatures. The alloy's machinability is good to fair.

Availability:

- Round bar, hexagonal bar, flat bar

Applications

- Aerospace components, marine hardware
- High-strength fasteners, pump and valve components
- Heavy-duty bushes and bearings
- Engine components

Key Features

- Excellent corrosion & erosion resistance
- Good resistance to shock loading
- Good weldability
- High wear and abrasion resistance
